

ABOUT US

**We develop
software solutions
for the digital
administration
of the Argentine
university system**

For **more than 25 years**, we have been working in collaboration with the different institutions that make up the Argentinean university system along with other government agencies. Our goal is to develop solutions adapted to the specific needs of our community, contributing to management enhancement.

We are a team committed to the **digital transformation of our country's education sector**. Through our collaborative working method, we have accompanied major achievements in **digital university management, in terms of, availability of quality data, improvement of services to university citizens, transparency and optimisation of resources**.

The University Information System is a pioneer in Latin America and has been recognised in different areas at a national and international levels. Since September 2013, we have been part of the **National Interuniversity Council**, thus consolidating our commitment to excellence and continuous advancement in this field.

Our key pillars

Open knowledge

Citizen services

Innovative technologies

Open source software

Digital transformation

Responsible use of public resources

Quality of information

Transparency in governance

Integrated and flexible solutions

Collaborative work

SIU Ecosystem

Ecosystem of flexible and innovative integration-oriented solutions

We offer an **Ecosystem** of solutions that integrate all the management areas of an institution:

- Administrative
- Financial
- Academic
- Human Resources
- Purchasing and assets
- Data Analysis

This set of integrated tools supports the improvement of management processes, data quality and decision making.

Main features

It enables the digital and integrated administration of an institution. Electronic management effectively replaces the need for paper documents and files.

It incorporates digital signature technology for digital documents, with the same validity as the holographic signature in the traditional paper document.

It integrates the solutions developed by the SIU and by the implementing institution, allowing the use of all available functions with a single username and password.

All the documentation produced through SIU solutions is integrated into a digital document repository, avoiding duplication, printed copies and scans. All documentation is accessible to the user from a single location.

Virtual surveys

Scholarship
management

Digital signature

Institutional information
analysis

SIU-Toba is our **web development environment** for building transactional applications. This rapid development tool has **a free licence**, a component-based architecture and its own integrated development environment (IDE).

Other projects

We work on a daily basis with different areas of the National Secretary of Education, the Undersecretary of University Policies and the National Interuniversity Council (CIN) to design and develop computer systems and analysis models that promote improvements in the management and in the quality of the data produced for the entire national university system.

Impact

More than 25 years promoting digital transformation in universities

Consolidation

These years of sustained work, have consolidated a national university information system with complete, secure and reliable data.

A growing community

More than 120 university institutions, both public and private, and different areas of the national government have joined our community, implementing the SIU Ecosystem's solutions. We have extended our reach to other organisations, such as municipalities, provincial governments, Argentine ministries and secretariats, promoting an open and collaborative governance.

Integration

The incorporation of the SIU Ecosystem is driving an in-depth review of the circuits and processes of administrative and academic management within universities, achieving a process-oriented integration of areas.

Services

Students, teachers and administrative staff of universities use our solutions every day to register for classes, take attendance, payroll, manage a purchase or the budget. In addition, management users have access to information analysis tools for decision making.

Streamlining processes and saving resources

The digitisation of administrative processes has a direct impact on the streamlining of procedures and services and on the reduction of time and savings in inputs such as paper, ink, printers, etc. For example, many universities are implementing the digital graduation circuit and the digitalisation of academic records, which significantly facilitates these procedures.

Secure procedures and information transparency

We use technology and standards that provide greater security for digital transactions. In addition,

we offer tools that allow institutions to make key information on their management available to the public, collaborating with the transparency, legality and legitimacy of the processes. Some examples are the **Portal Universidades Compran** (Universities Purchase Portal), which consolidates the procurement procedures for goods and services in force in national universities, or the **Registro Público de Graduados Universitarios** (Public Register of University Graduates), which allows anyone to verify the authenticity of a university degree.

Life quality

The incorporation of SIU solutions improves the quality of life of all the people involved in the institution by allowing them to solve different types of administrative procedures through the use of technology. These services are provided through the Ecosystem with a single username and password, from anywhere, at any time and with any device.

Putting technology at the service of people means improving their quality of life. Simplifying procedures means reducing waiting times and making administrative formalities more efficient.

SIU in numbers

127 Institutions use
SIU solutions

11 Solutions are integrated
in our Ecosystem

92 %

of the students use the
academic management
module over a total of
2.163.125 students from public
universities in Argentina

+ \$ 897.297.495.734

SIU EXPEDIENTE ELECTRÓNICO
INTEGRADO

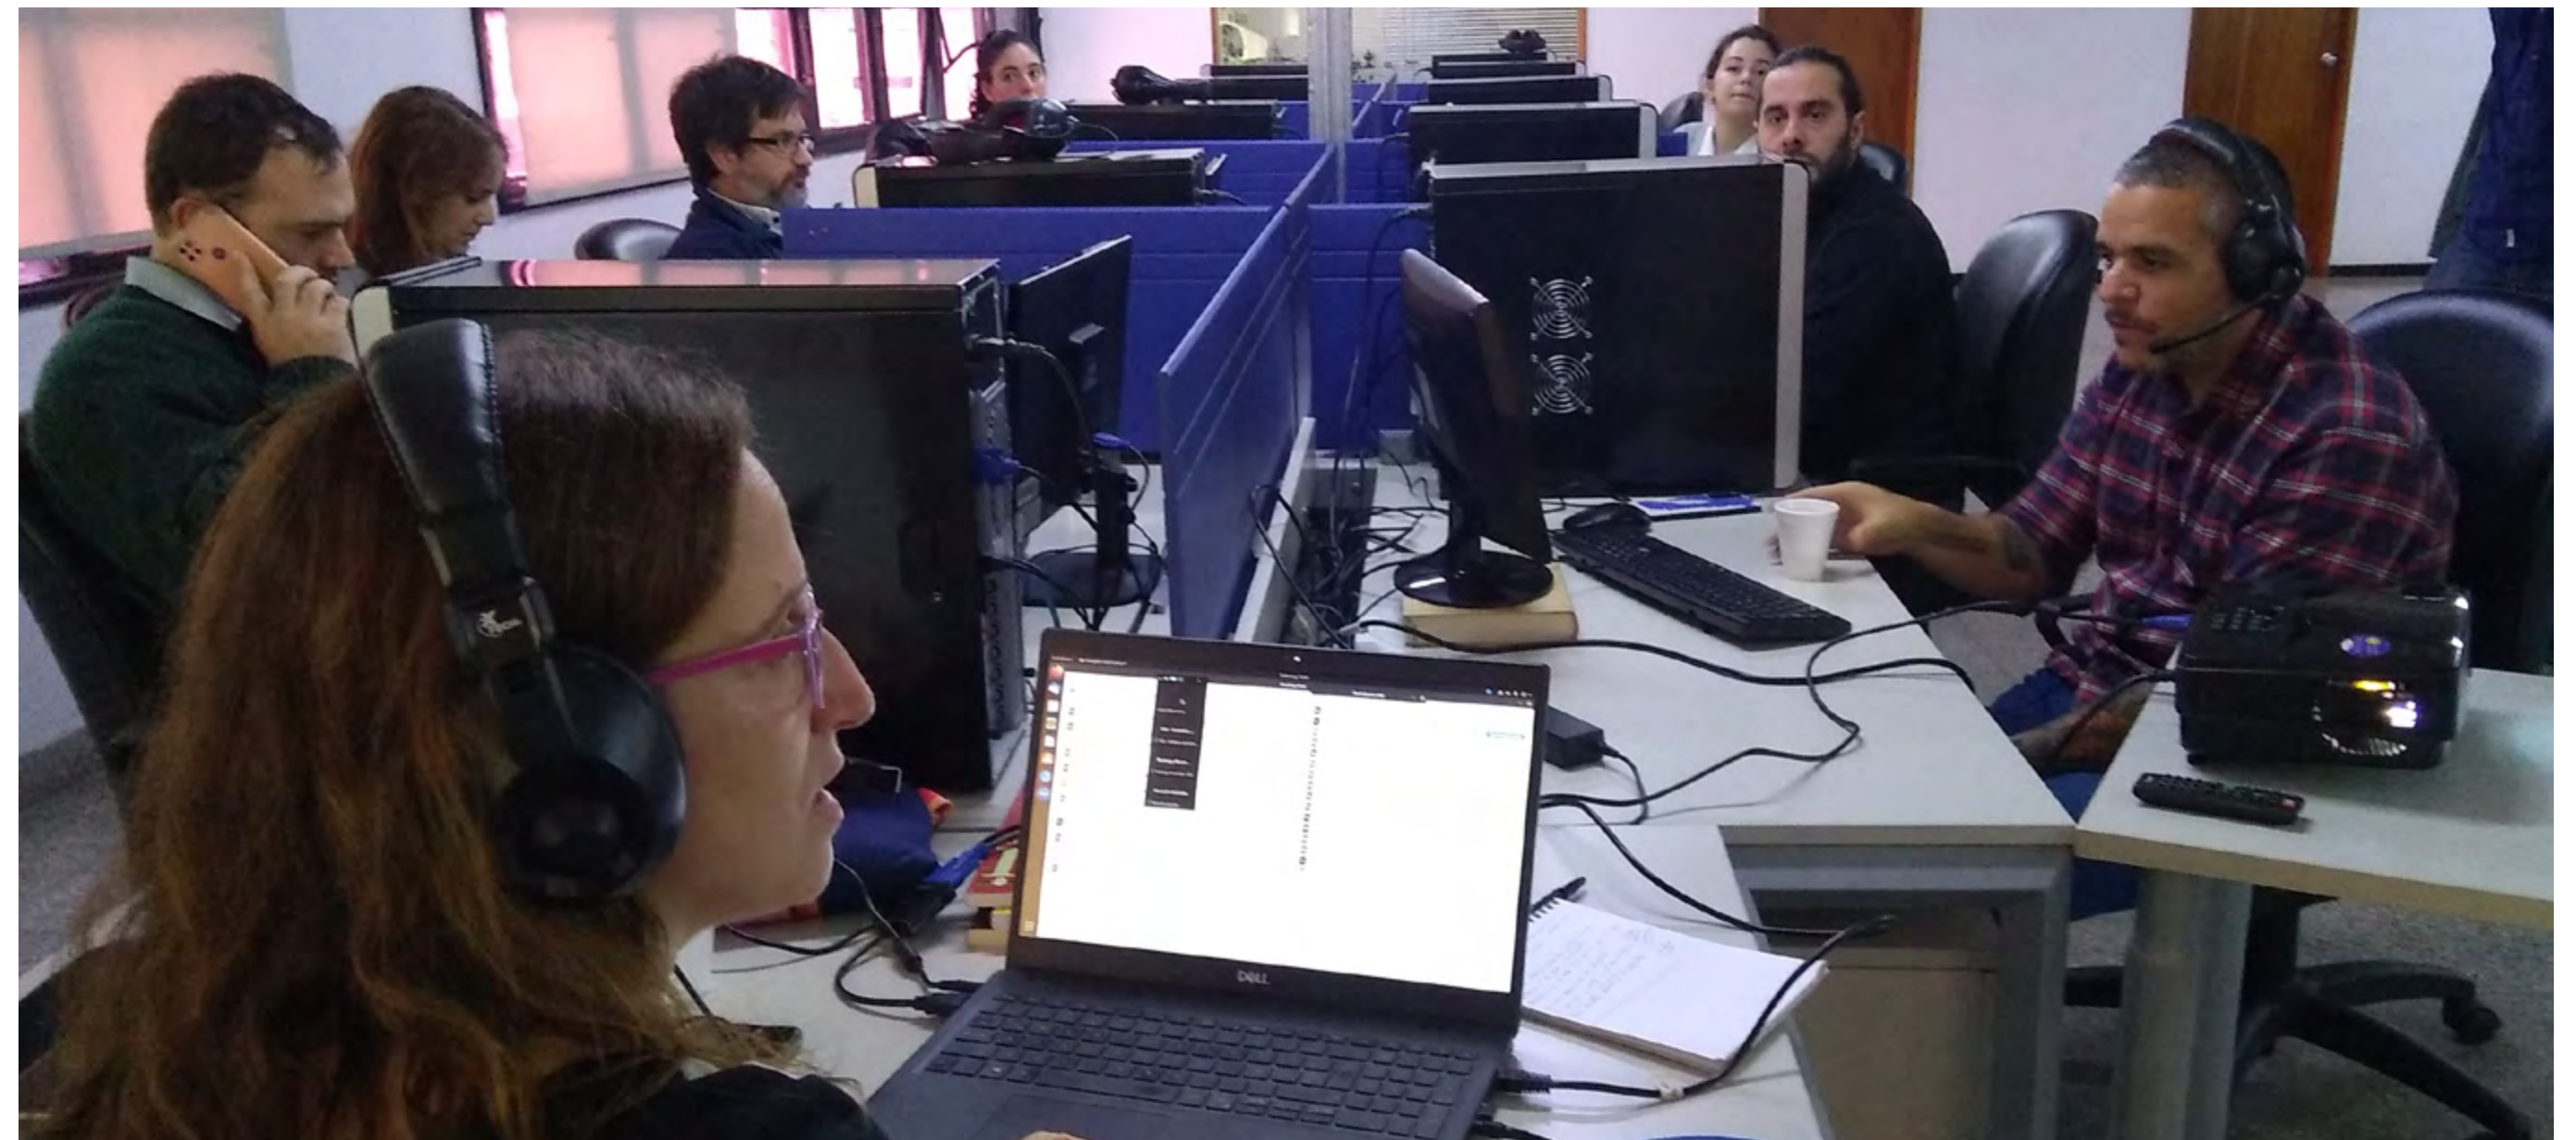

Community

+ 9000

More than 9 thousand people
from all over the country are part
of the SIU community.

Collaborative work. We adopt a collaborative networking approach because we believe that the only way to develop systems capable of adapting to the reality of institutions is by involving the people who use them.

Community of practice (CoPs)

We form communities where users interact, share knowledge and best practices, solve common problems and exchange experiences. They are horizontal spaces for collaborative technology governance that help value the role played by each person and strengthen relationships between colleagues as well as area management where tasks are carried out. This governance characteristic of the SIU, promoted from its start up, has received national and international recognition.

SIU Community: tools

We promote in-person and virtual spaces such as user committees, forums, instant messaging groups, training and collaborative development, through which knowledge produced in the SIU is democratised, made transparent and shared with the entire community.

Towards a new digital culture

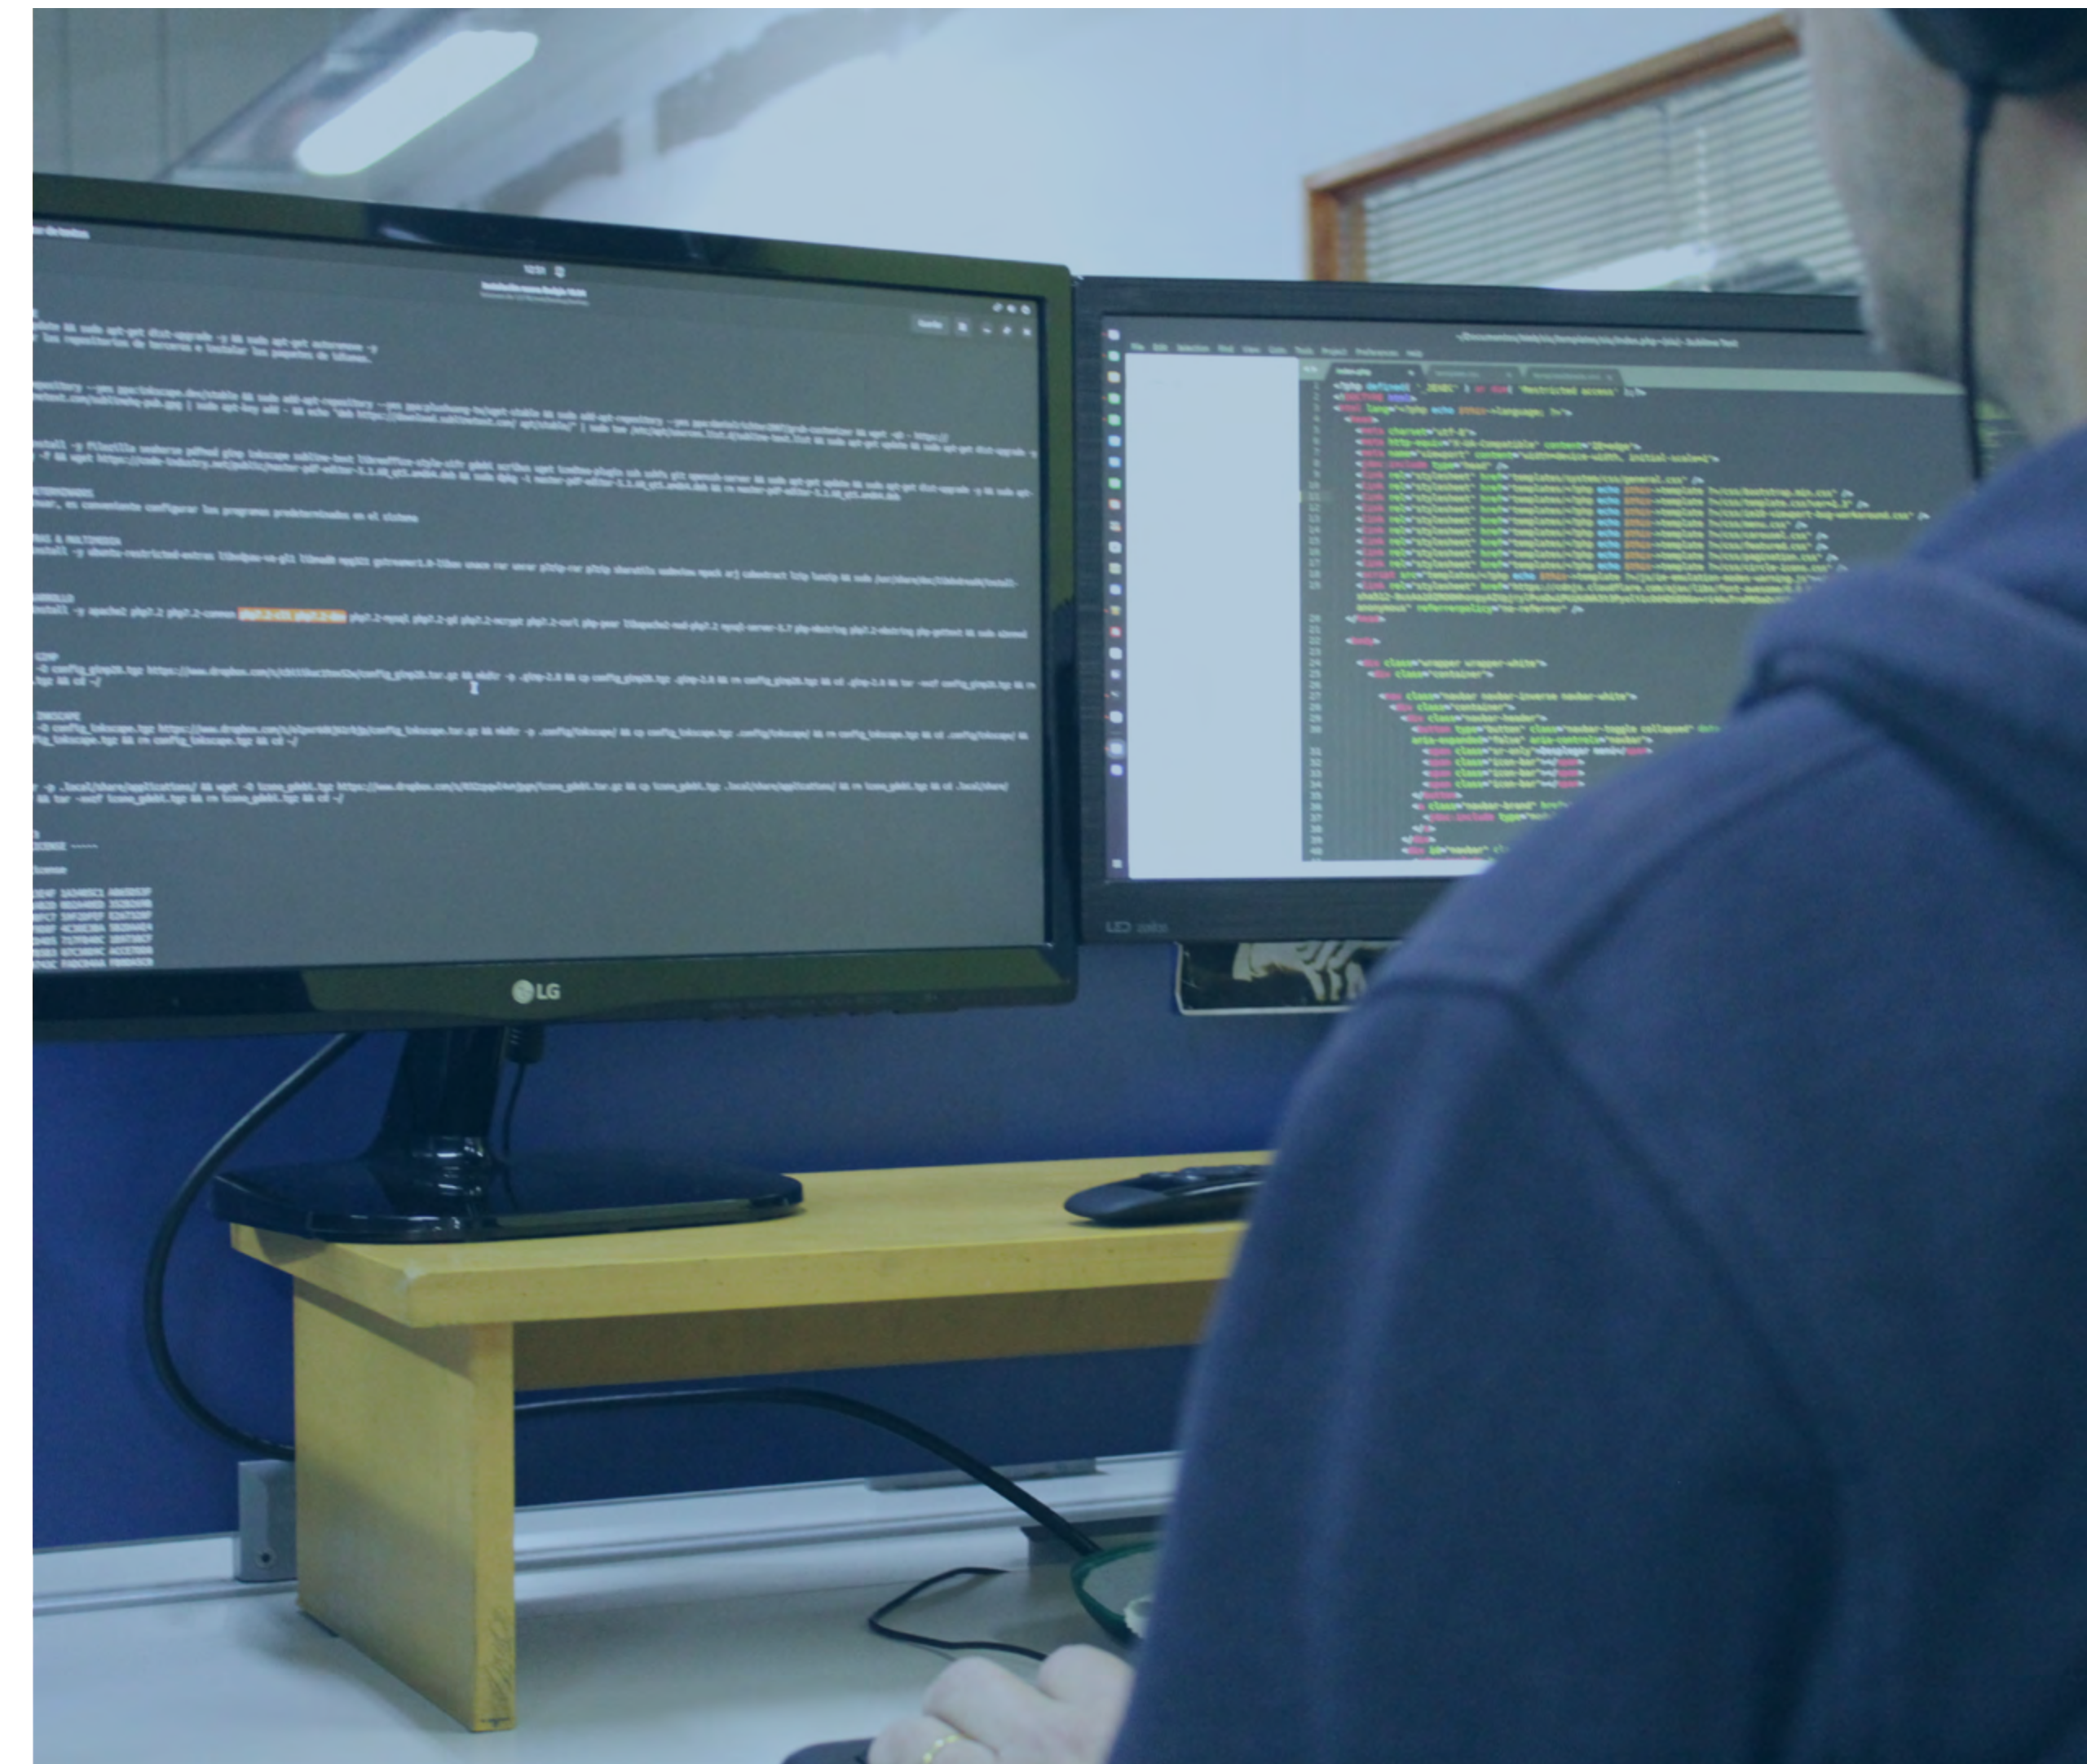

“The only way to develop systems capable of adapting to the reality of institutions is by involving the people who use them.”

Implement SIU solutions

How to obtain SIU solutions

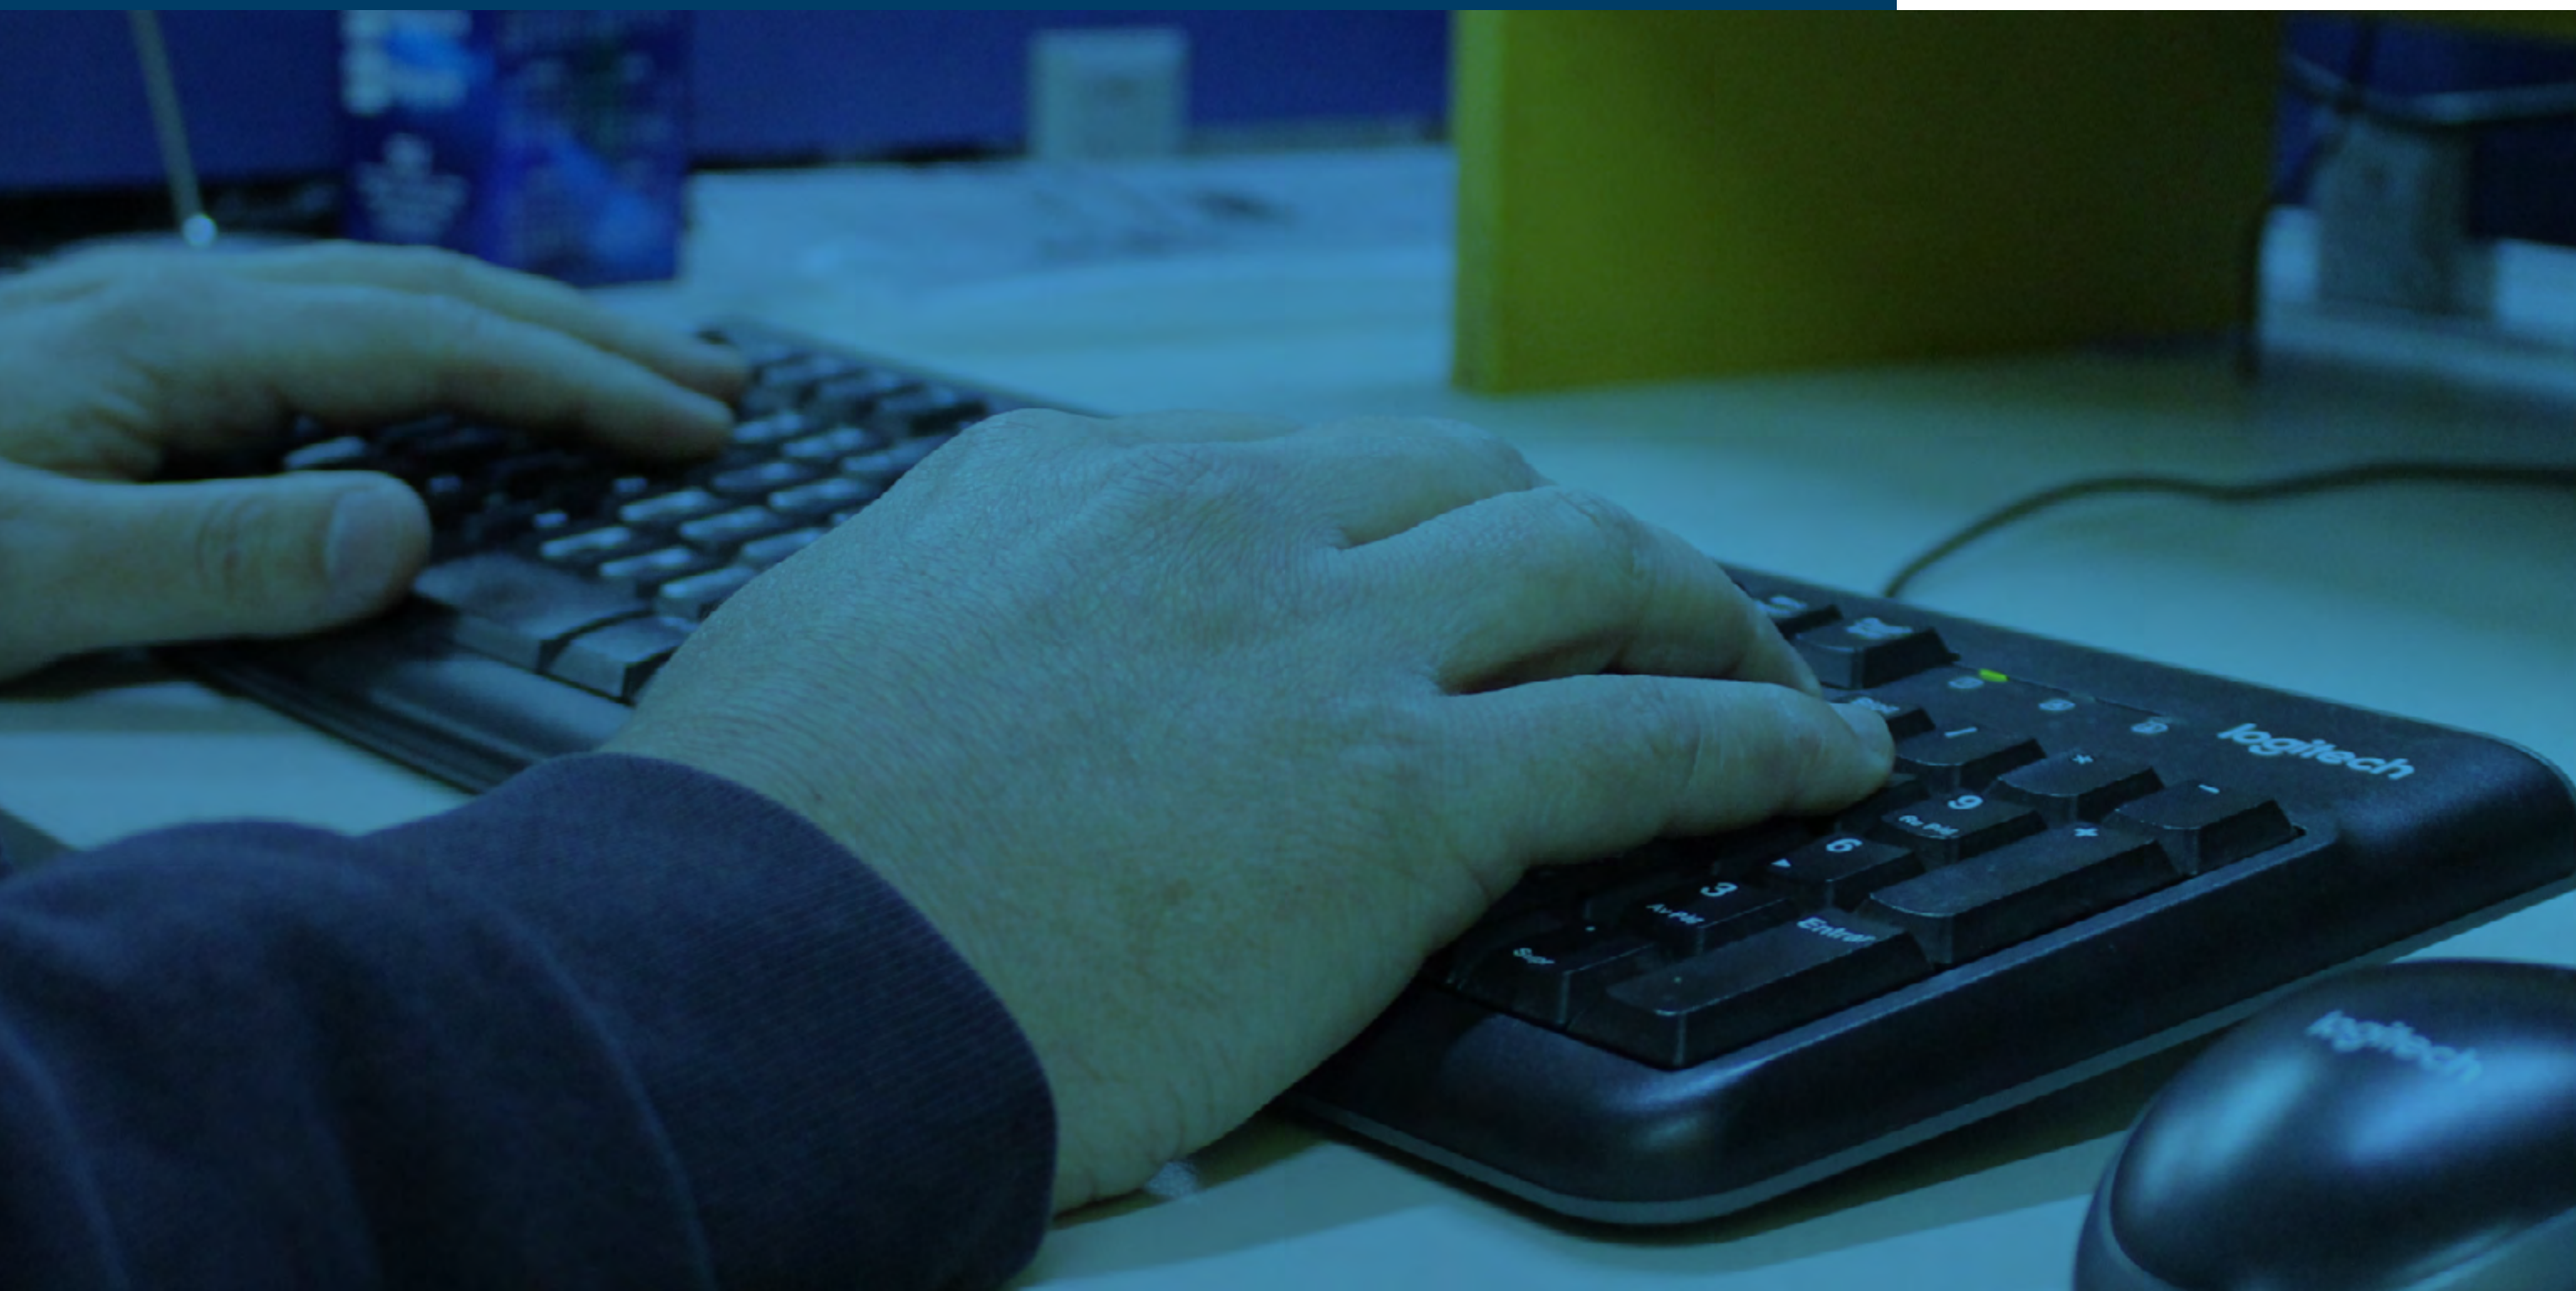

Our ecosystem is available to any institution in the national public university system at no cost.

There are also numerous installations of our solutions in other educational institutions, municipalities, provincial governments, ministries and secretariats, among others. These types of institutions must sign an agreement regarding implementation conditions.
